
India's car market, first half of 2026

22.9 lakh cars.

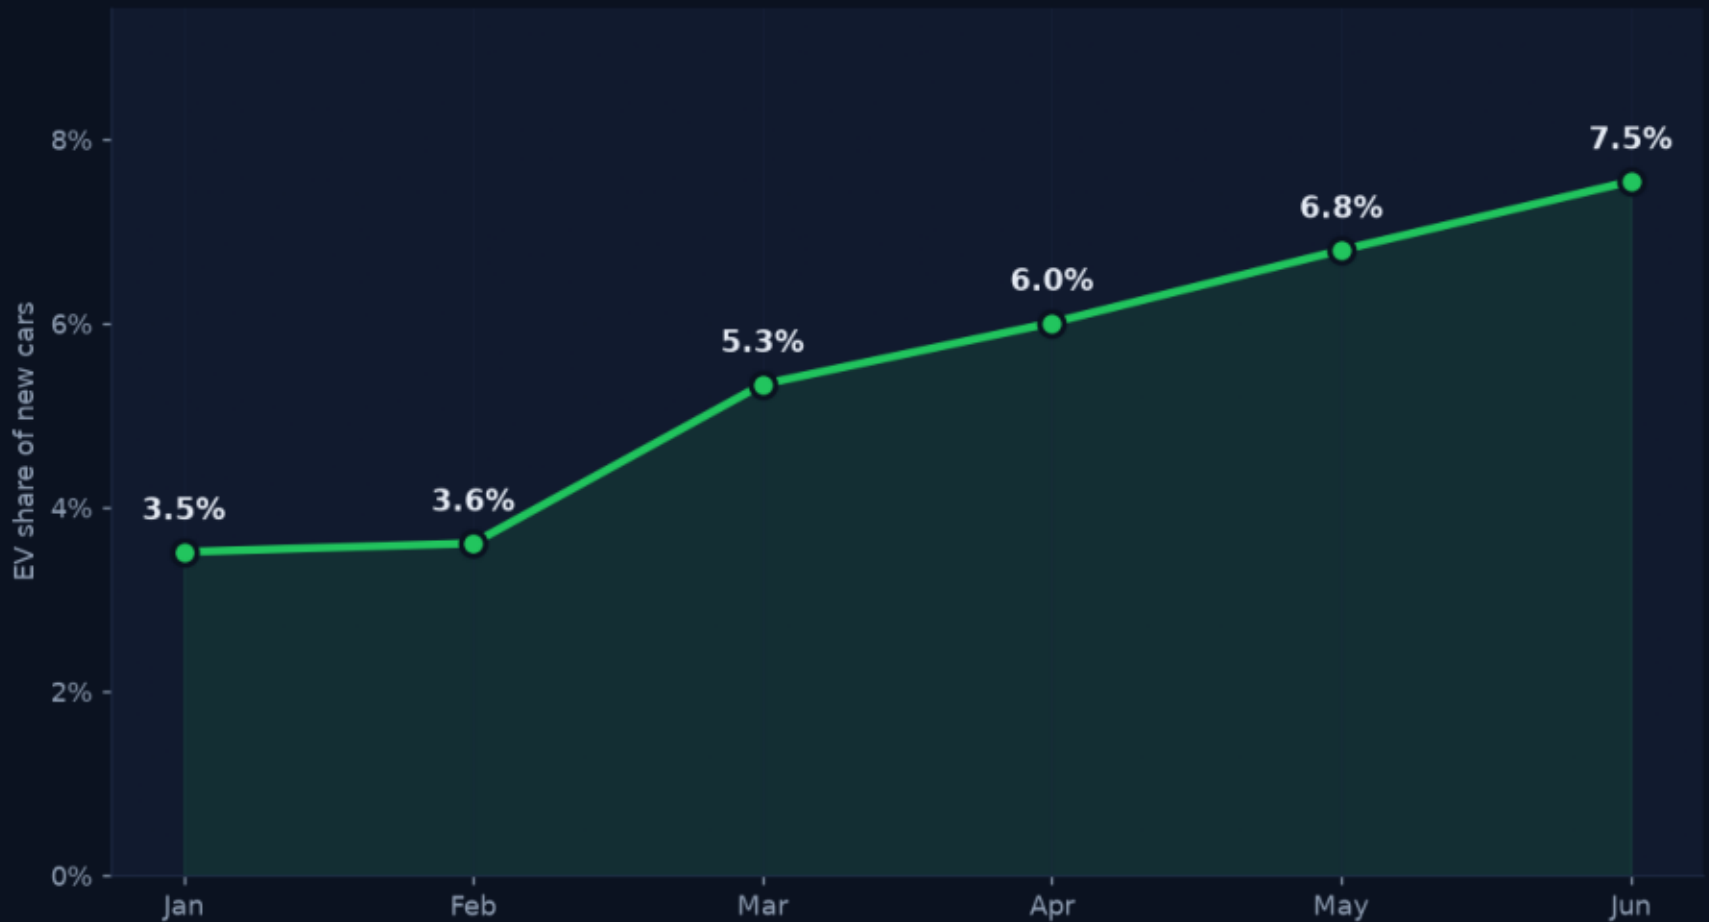

1.19 lakh of them electric.

Cleaned from 146 raw government files

Vahan Dashboard, Ministry of Road Transport & Highways

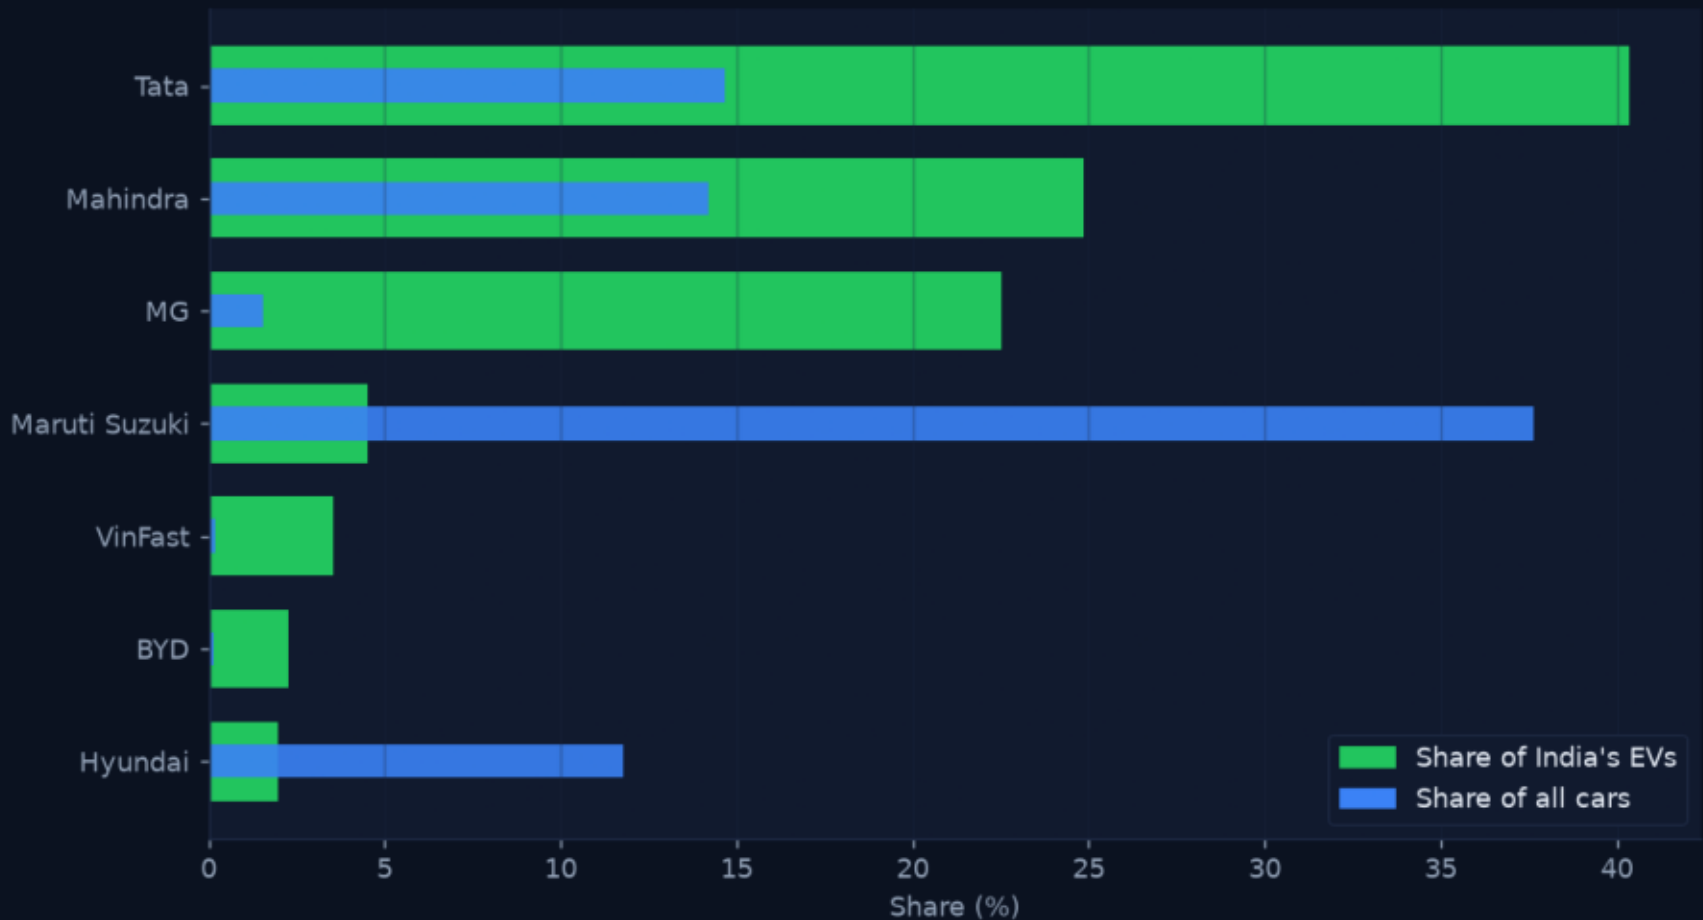

1 January - 17 June 2026

EVs are winning, month by month

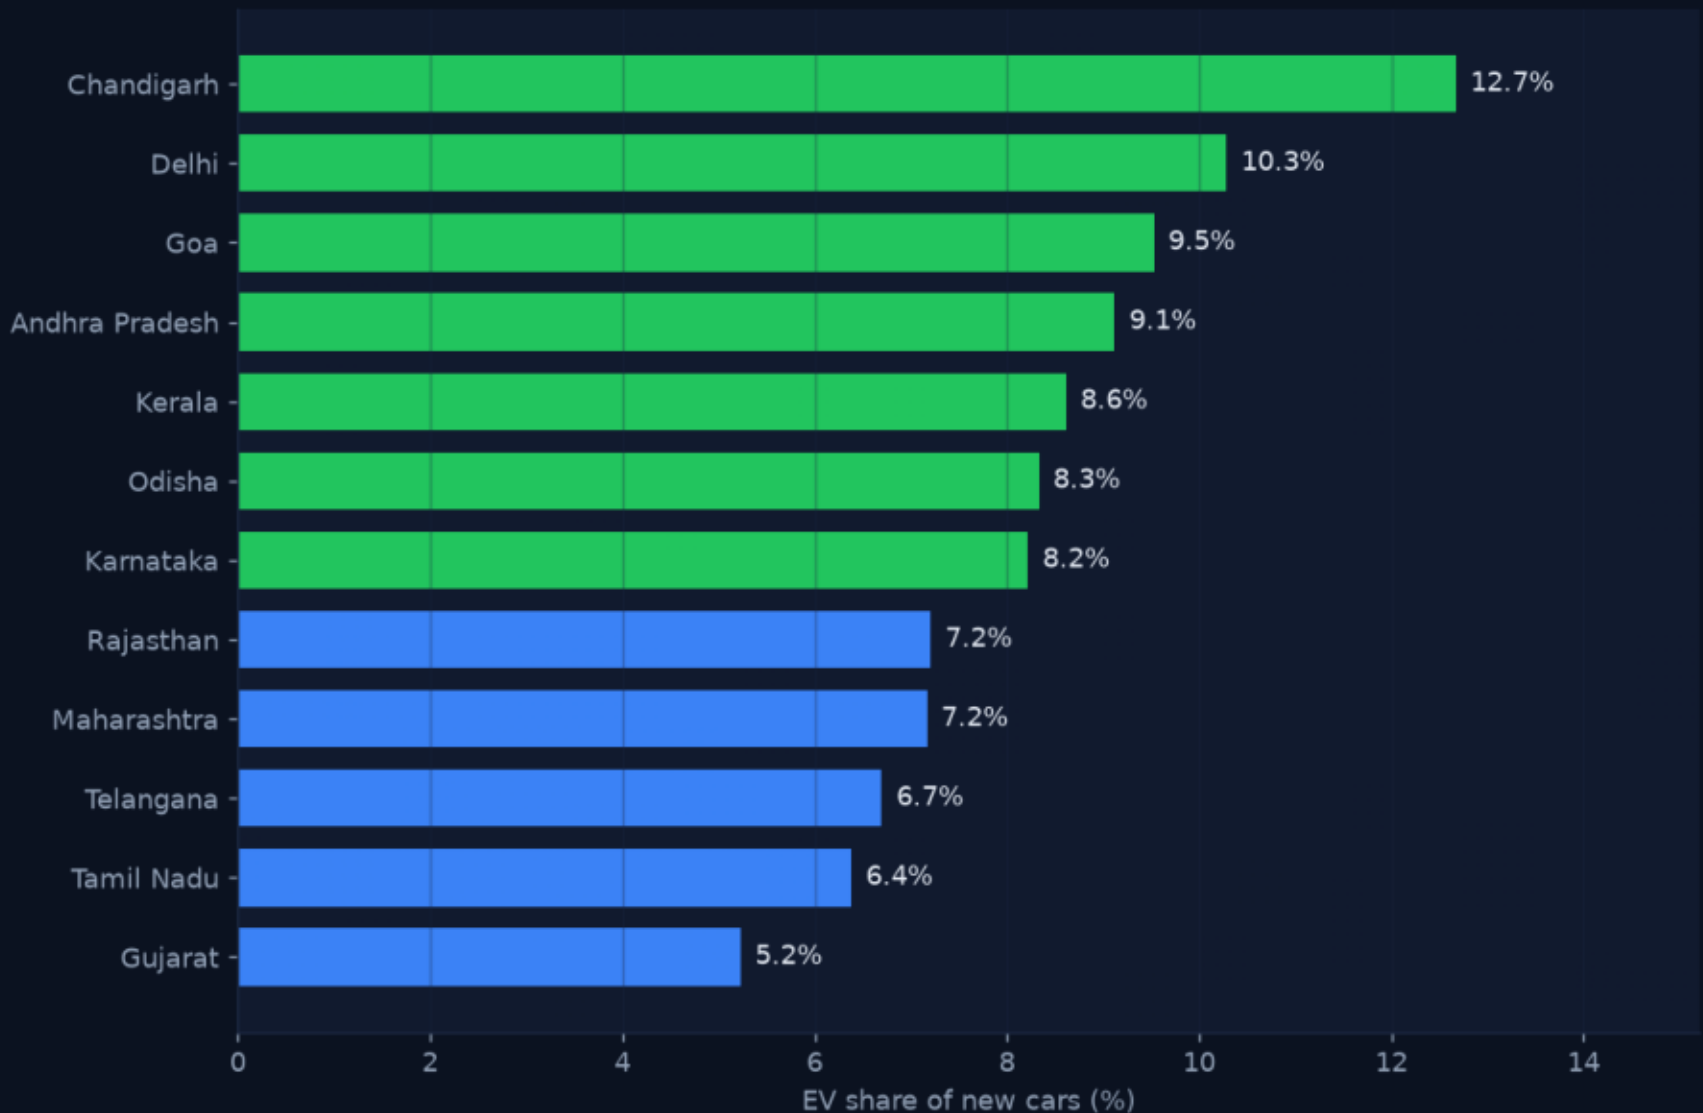

3.5% of new cars in January. 7.5% by June.
Every single month moved in the same direction.

But not the brands you'd expect

Maruti Suzuki sells 37.6% of India's cars — and just 4.4% of its EVs.
Tata, Mahindra and MG own the electric transition.

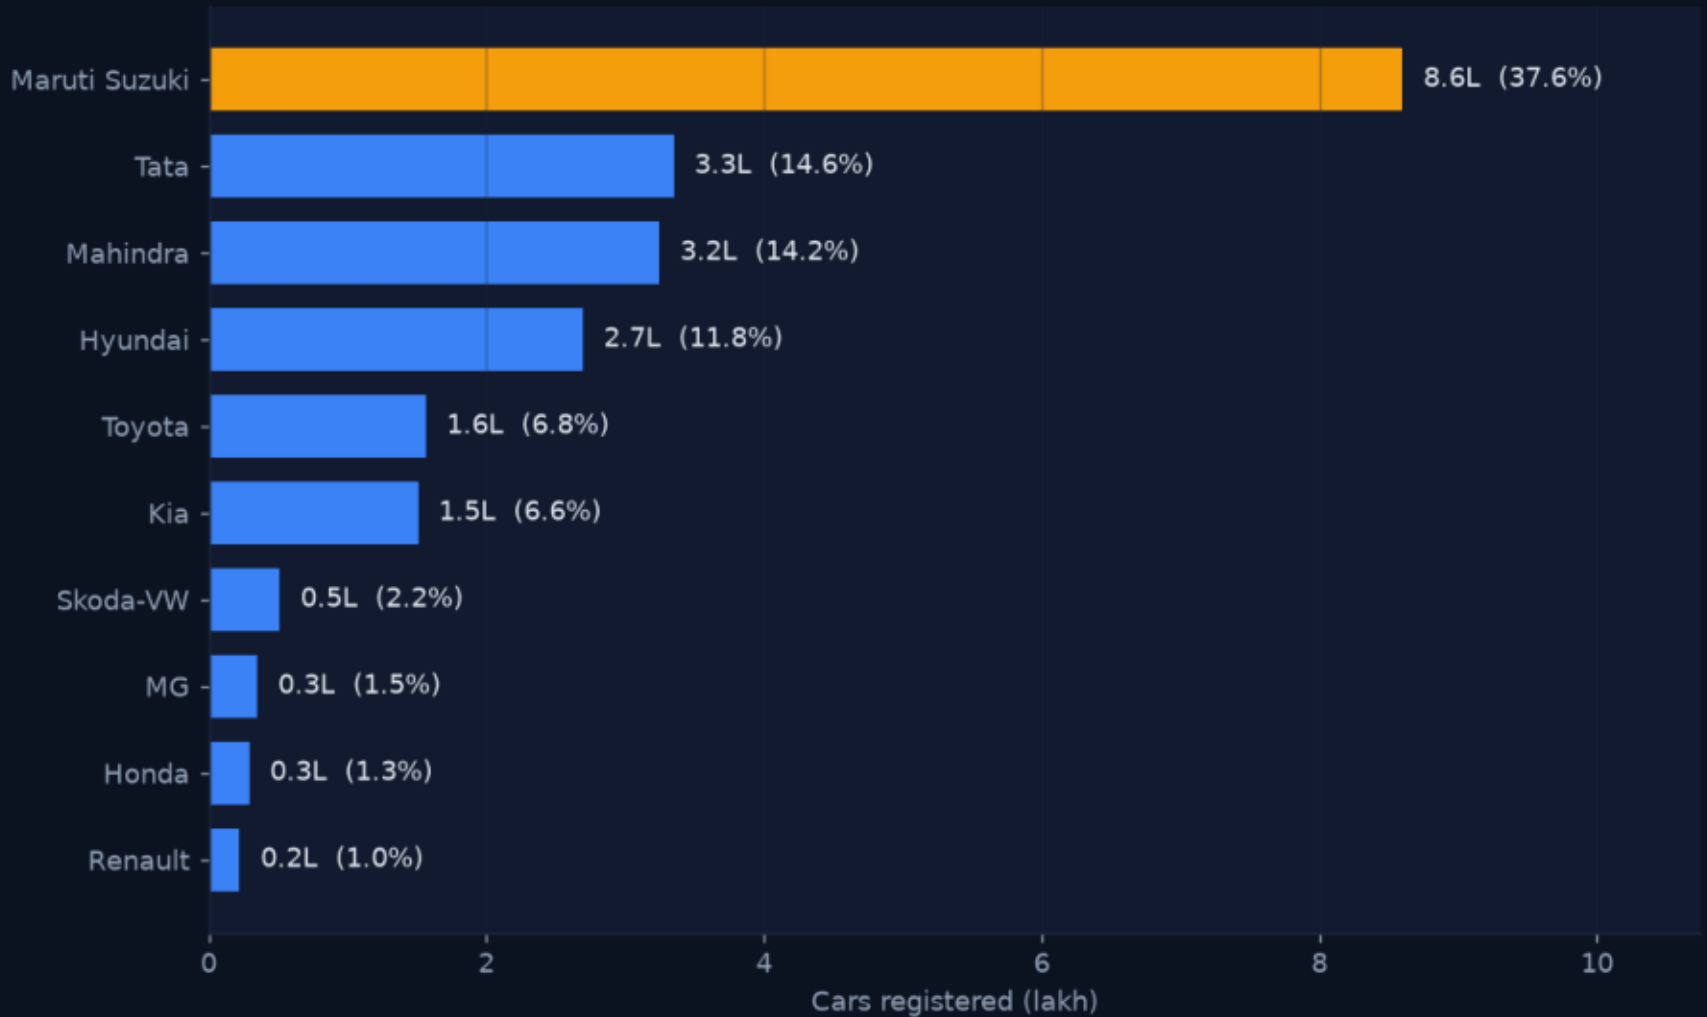

Geography decides adoption

Chandigarh 12.7%, Delhi 10.3%, Goa 9.5%.

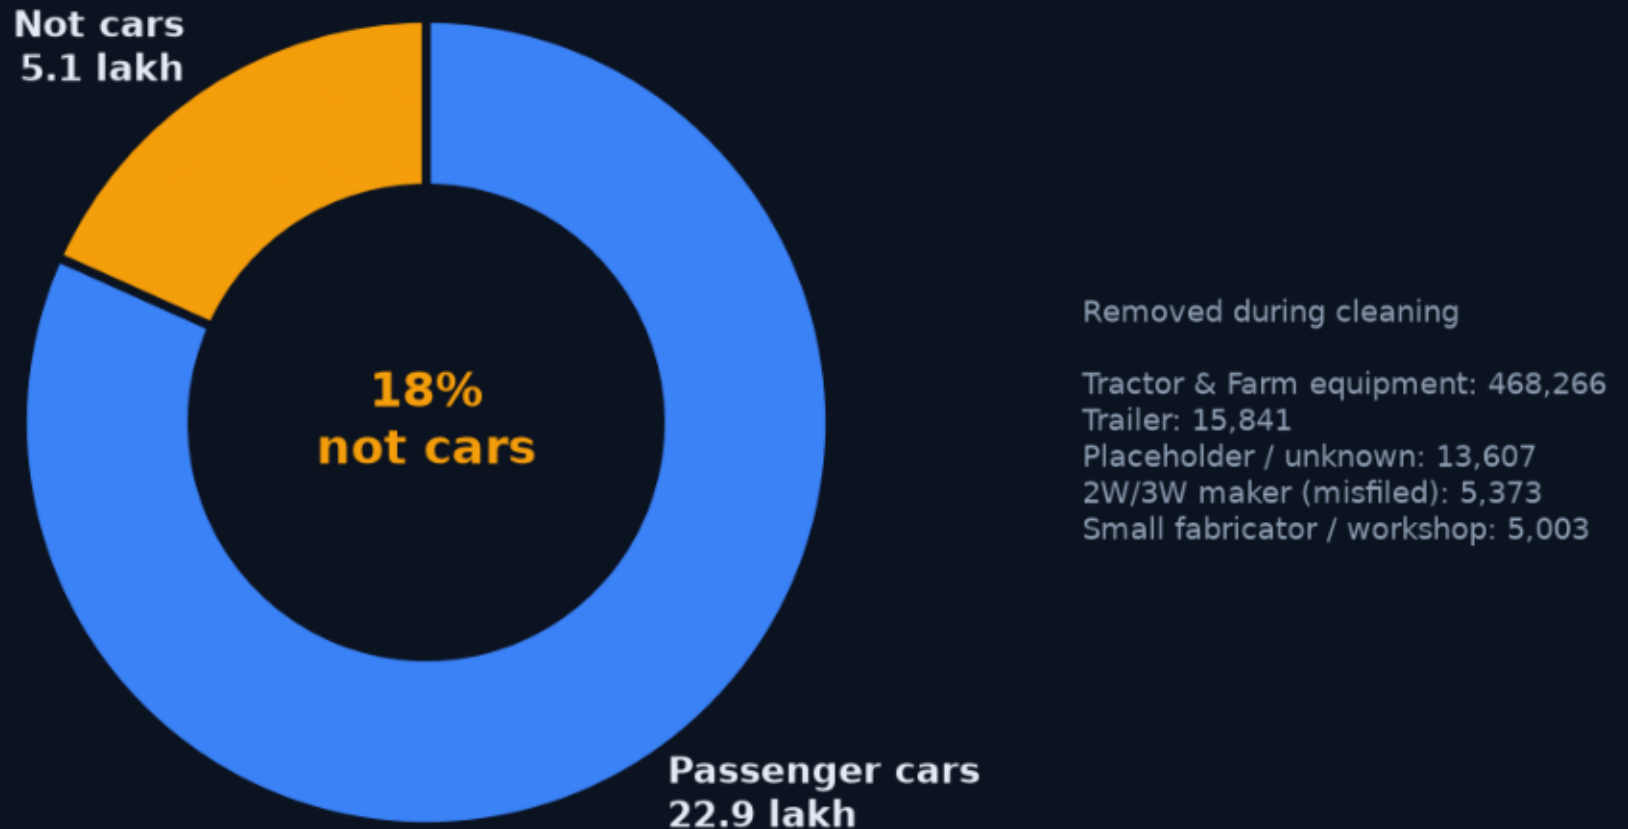

Haryana sits at 0.4% — low enough that reporting gaps are the likely cause.

Four brands, three quarters of the market

Maruti, Tata, Mahindra and Hyundai together account for 78% of every new car registered in India this year.

The part nobody sees

18% of the government's "4-wheeler" category is tractors, trailers and construction equipment. Skip the cleaning and every market-share number is wrong.

Six months in numbers

22.9 lakh

passenger cars registered, 1 Jan – 17 Jun 2026

13,600

cars registered every single day

5.2%

were electric — rising to 7.5% by June

84%

of EVs come from just Tata, Mahindra and MG

Source: Vahan Dashboard, Ministry of Road Transport & Highways, Government of India.

Registrations, not factory dispatches. June covers 1–17 only.

How it was built

Collect

146 raw .xlsx exports — 36 states and UTs, all-fuel and EV-only, two snaps

Clean

Python + pandas: two export layouts, trade-certificate codes stripped from maker names, 614 names normalised to 607

Classify

Rule-based mapping of legal entities to brands, parent groups and origin countries; tractors, trailers and JCBs separated out

Validate

State totals reconciled against the national file — exact match on 27.9 lakhs four-wheelers

Visualise

Tableau workbook generated programmatically, plus a .hyper extract
